EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. John DeLuca on 19 May 2006.

The application has been amended as follows: claim 1, line 5, "frime" had been changed to --frame--, line 13, "a plurality of abrasive elements..." has been changed to --a plurality of laminar abrasive elements--.

2. The following is an examiner's statement of reasons for allowance: the closest prior art of record does not disclose or fairly teach the claimed invention. The closest art, Platt, 1,732,695, teaches grinding or polishing the upper surface of a sheet of glass, the abrasive elements being discs that rotate, orbit, and are moved linearly across the sheet by a closed loop winding element, the winding element moving the abrasive element across the glass surface, where the abrasive element is then released from the winding element, placed on a truck or trolley, and moved in a direction along the length of the glass, where it is attached again to the winding element, to traverse the glass sheet in a parallel but opposite direction. The abrasive element is not a laminar abrasive element as defined by the applicant, and the examiner does not consider it a fair interpretation to read the disc-abrading tool of Platt as a "laminar abrasive element". Applicant, page 4, lines 17-22, has defined the laminar abrasive element as a fringed

abrasive sheet backed by fibrous elements, to produce a flexible tool to work both side and top surfaces of the workpiece. Further, Platt does not disclose that the abrasive element is disposed at a fixed incline with respect to the advance directions of the winding element while engaging the workpiece. Platt discloses that the workpiece is glass, and if the abrasive elements disclosed by Platt were disposed at a fixed incline relative to the advance directions of the winding element while engaging the workpiece, the glass surface would not be evenly or consistently ground or polished, as the entire surface of the disc tool must be in contact with the glass sheet to ensure even polishing.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
